

Production of hollow plastic articles

Abstract

5

The present invention relates to a process for producing hollow plastic articles, encompassing the following steps:

- a) producing a tubular plastic parison on a blow molding plant
or coextrusion blow molding plant
- b) cutting open the extruded or coextruded plastic parison to
give at least one semifinished open-surface product
- c) thermoforming the resultant semifinished open-surface product
to give half-shells
- d) welding the thermoformed half-shells to give a hollow
article.
